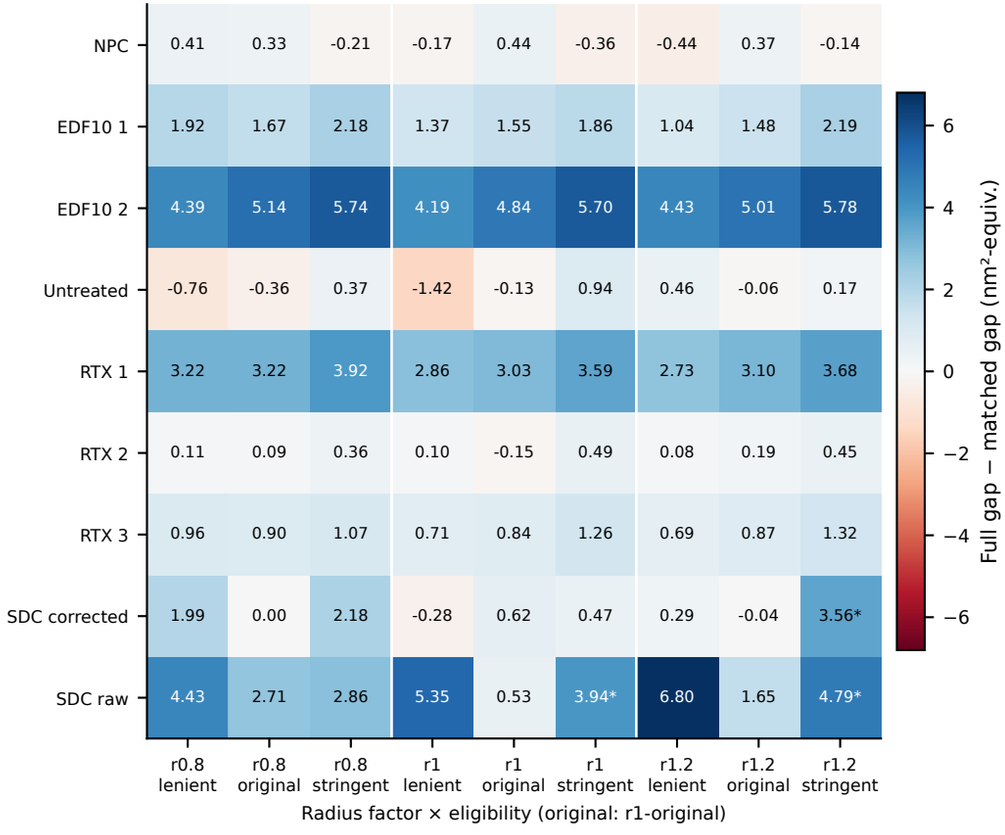
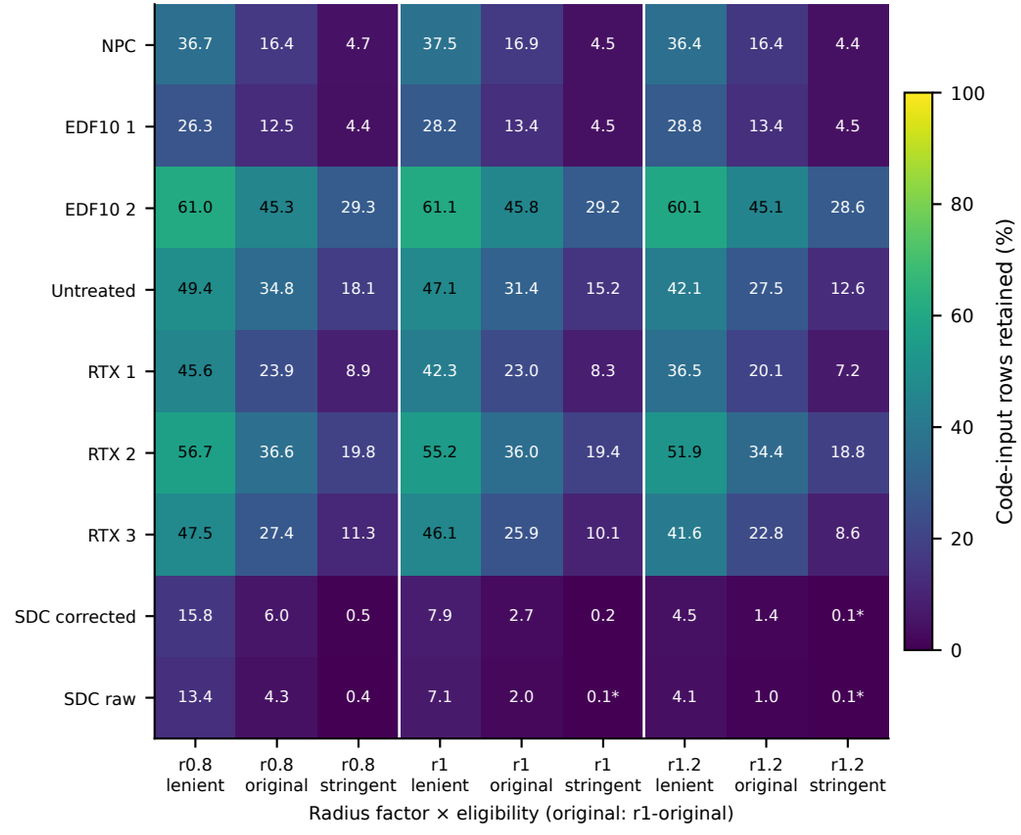
All eight acquisitions / nine views; post-hoc conditional selection sensitivity

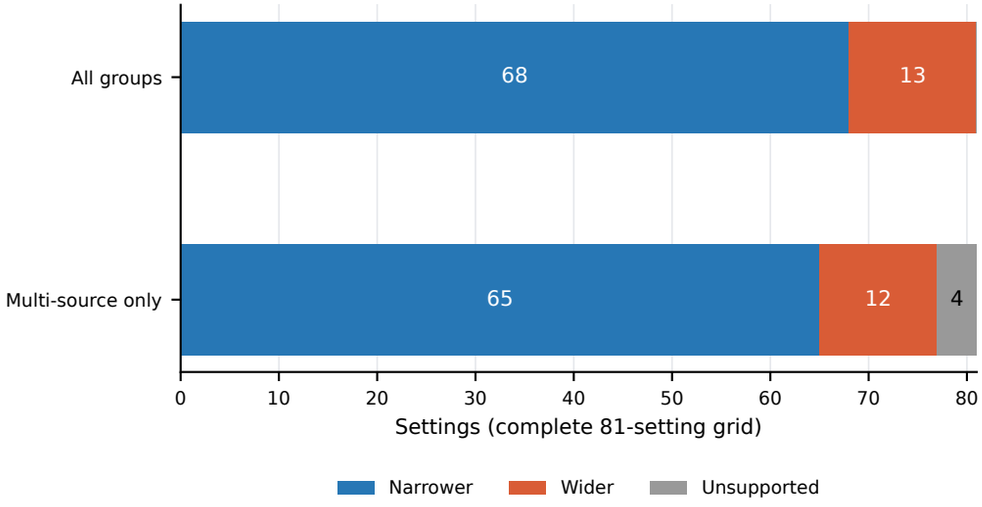
a Matching can narrow or widen a gap



b Reference coverage changes with selection



c Exclude guaranteed singleton agreement



d Agreement has a limited interpretation

One inferred source per coarse group:

code and diagonal terms coincide algebraically.

78/81 settings: individual Fieller sets usable.

3/81: twelve all-real or disjoint sets retained.

Selected identities remain unvalidated;

zero-spanning intervals do not show equivalence.
