a Robustness depends on the violation
Uniform kernel
Source-dependent kernel
Code geometry
Geometric: absolute sample-mean ratio bias
Arithmetic: absolute sample-mean ratio bias
b Coverage retains unsupported cases
144 primary conditions; orange: EDF10 replicate 2
Conservative rectangles are not exact-95% tests
Geometric joint usable coverage
Arithmetic joint usable coverage
c Wider sets often lose small-motion resolution
T=3; 36 conditions, not biological replicates
Blue/orange: Gaussian/residual
Circle/triangle: q=.10/.15
Geometric: same endpoint
Arithmetic: correct coverage + positive-motion resolution
d Quiet D remains insufficient
arithmetic
geometric
Errors >0.01 with quiet D /864 cases
